xsitefuel

What is XSite Fuel?

XSite Fuel Manager is an easy to use web based software that reconciles your fuel sales to wet stock inventory levels, calculates your shift and cash totals, and produces fuel and sales reports. Reports can be accessed through any computer, tablet, or smartphone with a connection to the Internet, which greatly reduces the time required to reconcile total fuel sales. XSite Fuel retrieves tank levels automatically from your tank gauge, or accepts levels from a dip, and produces an automatic daily inventory gasoline record for tracking and monitoring.

XSite Fuel Manager:

- Allows easy configuration and set up for any Gas Station or Convenience Store location
- Calculates period ending inventory losses/gains by tracking sales, deliveries and tank dips.
- Retrieves fuel sales and shift financial totals from the POS.
- Allows customizable date range for reports and sales summaries
- Provides detailed sales history to allow for more accurate ordering and prevent low fuel levels

POS and Tank Gauge Integration

Automatically retrieve pump reads, category sales and payment methods from POS. This reduces time and eliminated errors.
